

RAPAPORT'S

GLOBAL GUIDE TO GEMOLOGICAL LABORATORIES

Diamond grades, country of origin, synthetics and gemstone enhancements are all crucial issues affecting the value of gems and jewelry. The industry depends on gemological laboratories to supply—and verify—important information about diamonds and gemstones. On the following pages, you'll find an international directory to some of the most influential labs around the world.

Rapaport Diamond Report does not endorse nor recommend any of the gemological laboratories in this directory. To the best of our knowledge, these labs are each accredited in their country. Rapaport-affiliated companies represent GIA Laboratory services in Israel, India and Belgium.
